

It is important to understand the impact of government policies on the Public Services. This session has covered the Clean Air Strategy and looked at some of the proposals. You now need to think about the impact each of these proposals could have on a public service. A selection of the proposals has been chosen and outlined in the first column of the table. You need to think about the potential impact for the public services and highlight if there are any particular public services that might be affected. When you have completed the table you need to save a copy so that you have a record for your notes.

Proposal	Impact	Public Service
Retrofitting buses, lorries and taxis		
Setting up clean air zones		
Targeted car scrappage scheme		
Fines or restrictions on all polluting vehicles		
Removal of speed bumps and other initiatives to alter driving style
